Thanks, I would like the coordinates of the individual fish if it is not going to be a huge level of effort. I looked in QM and found the composite coordinates - I will see if this will work for my mapping.

Working on the benthic stuff, but I will have to finish early next week. Mike and I are going to try and talk on Tuesday, and we should be able to get you comments shortly thereafter. It is taking me a little while to get back into the specifics of Portland Harbor.

Are you looking for the coordinates of the individual fish making up the composites? Locations for the reported results (which I assume is a centroid of the composites) can be found in either the QM or RI data bases. I have to think about where the coordinates for the individual samples are - they are somewhere. I will get back to you if that is what you need.

By the way, how are those benthic comments coming?

Eric

Subject: PH Smallmouth Bass Collection Location Coordinates

Hi Eric,

I was hoping you might be able to help me locate the location coordinates for smallmouth bass from the Round 1 and Round 3B collection efforts. I am putting together a map for a talk I am giving in Nov. I looked through the Round 1 and 3B field sampling reports and could not find this information. I am interested in both the composite coordinates and the coordinates for the individual fish that went into the composite. I am hoping you might be able to easily pass on this info since I know you have put together maps for your data evaluation efforts.

Thanks!

Jennifer
